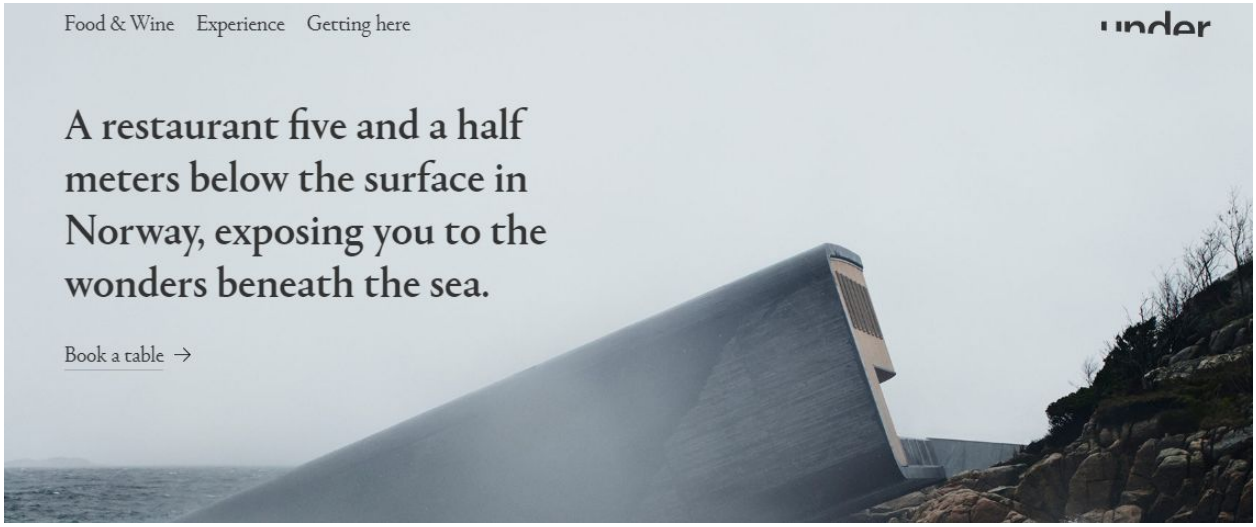
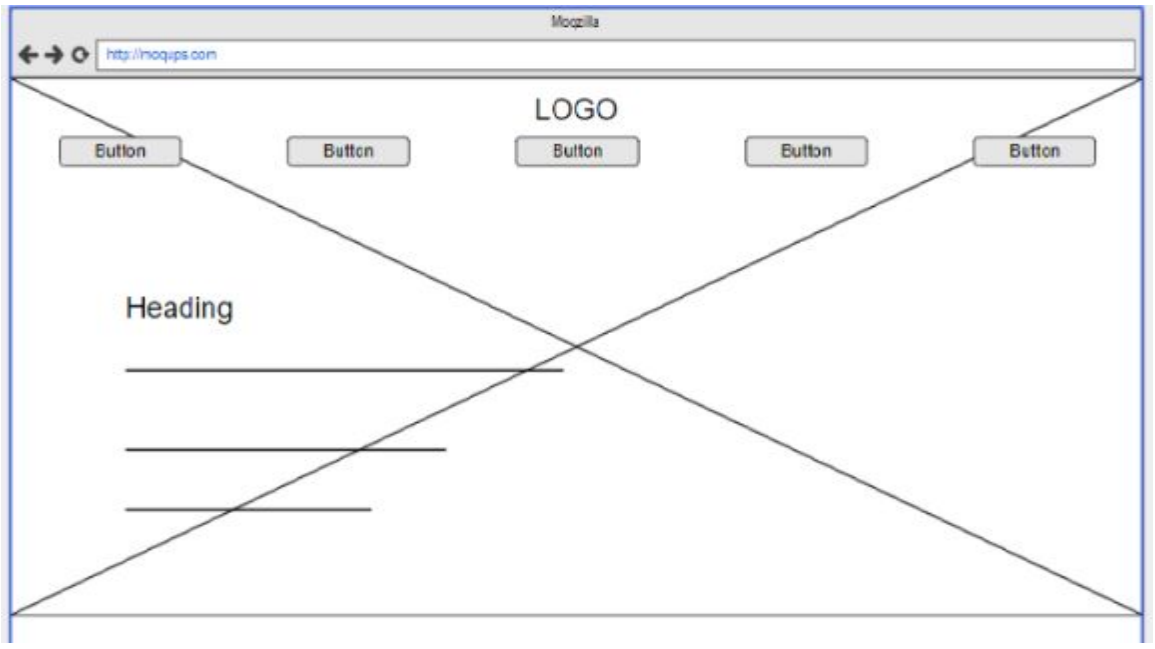
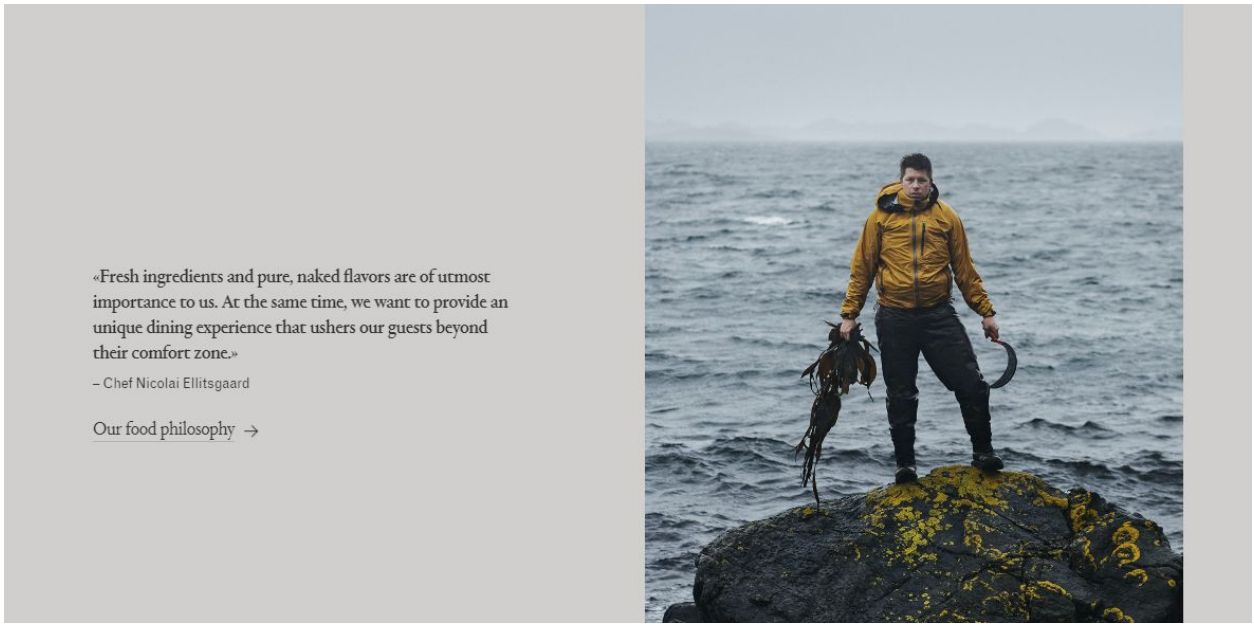
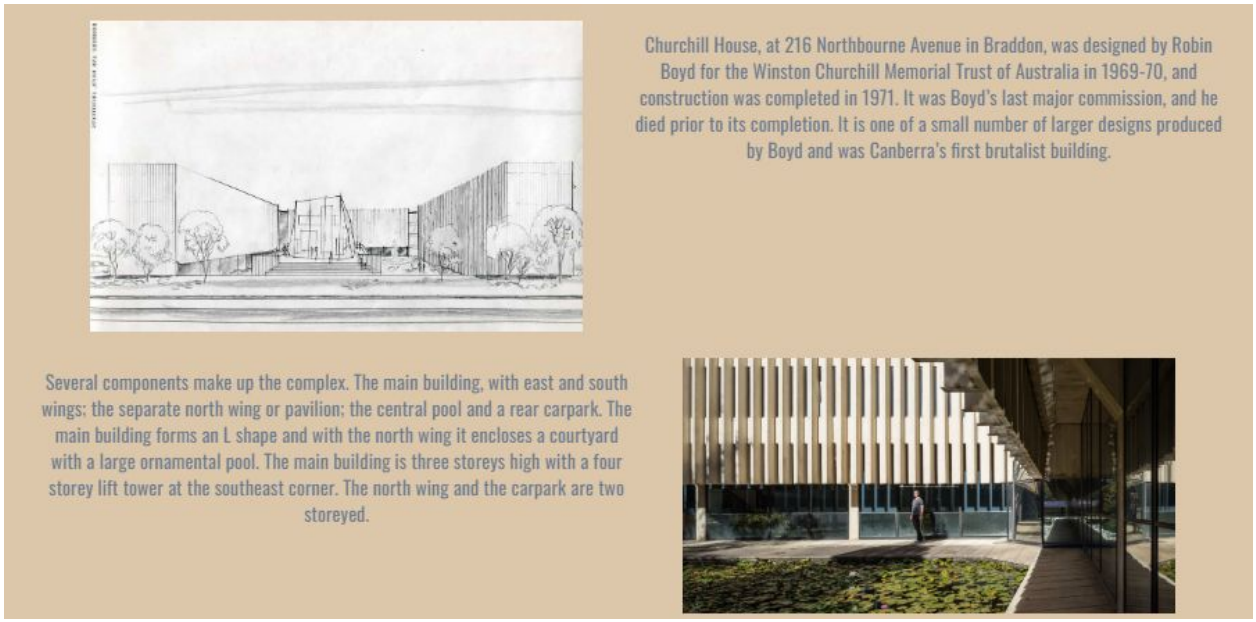
Design Process:

Firstly I had to research and try to find inspiration from other websites, the website that gave me the most inspiration was https://under.no/. The Under website was the one that gave me the most inspiration when I designed my website. I really like and wanted to include the most from this website was the Hero Content with the logo and the navigation menu. I didn't really like the logo and navigation bar on the sides so I changed it to how I wanted it. I also got inspiration for the 2 by 2 row and column grid, one side being an image and the other text and then alternated below. (Wireframes below:)









I also got a great amount of inspiration from the grid of images on https://www.samuelsre.com/. I really like the grids of images on the website as I thought it looked really clean and thought I would look really nice on my own website. On my wireframes I wanted to implement this idea with the hero content in the background with the grid of images in front of the hero content.

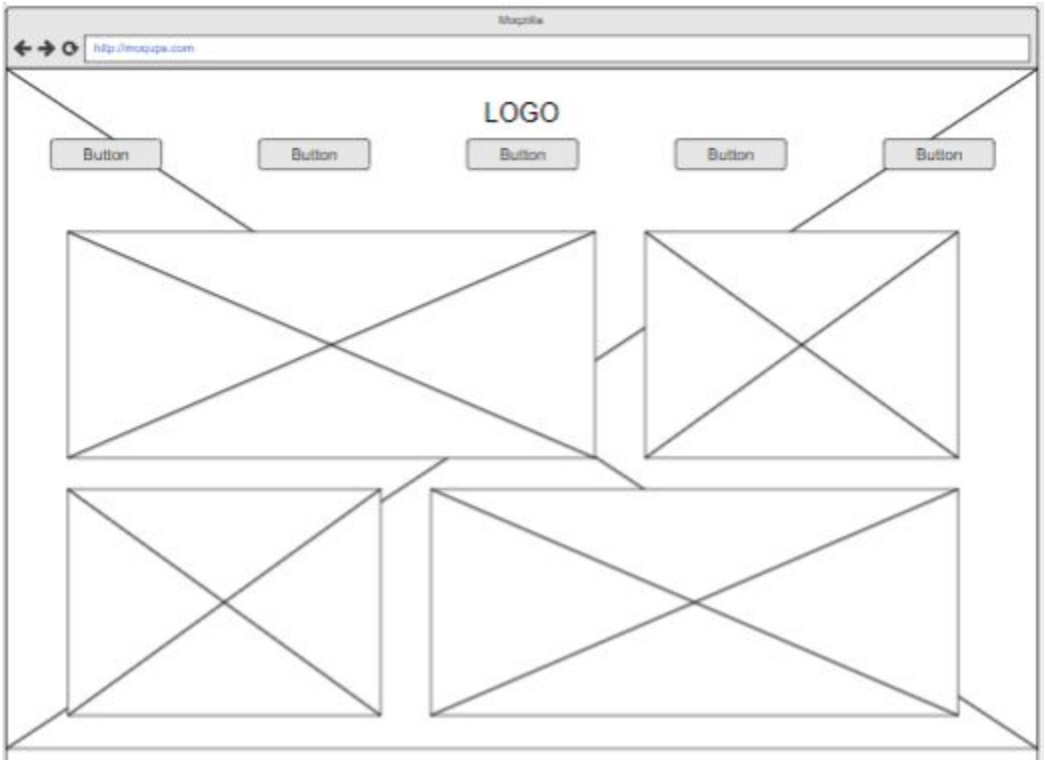
Development Process:

The challenges that I faced when actually getting the website to 100% look like what was supposed to look like, to what I designed on the wireframes. The one thing that I couldn't make look exactly like my wireframes was, I wanted to have a grid of images of the Churchill House above the hero content just below:



One of the challenges that I faced was, on the Significance page when the website is on the responsive mode, I had trouble scaling the hero content image and the content image. I didn't have enough time to try to change the sizing of the image, so my solution to the problem was to try to change the background position to make it most visible. Something that I would do differently next time would have to be adding everything that I wanted to add from the wireframes, as well as possibly having transitions appearing at different times on the page for example when you scrolled down it would do a transitions or even having a GIF or video.
